

APPLICATION AND USE:

The Cyclone Rake Classic is smaller and more maneuverable than the Cyclone Rake Commander, Cyclone Rake Commercial PRO or the Cyclone Rake XL. Because of smaller size, it weighs less when full. It is particularly advantageous under three conditions:

1. Properties which are tightly congested due to fences, closely spaced plantings, smaller lawn areas and closely spaced trees. Also, properties with limited turning space.
2. Owners of smaller riding mowers, especially rear-engine riders and front engine mowers of less than 10 horsepower.
3. Properties having steep slopes and lawn gradients. The smaller size and weight gives better steering control on steep slopes, and less strain on the mower.

As folded flat, for wall mounting.
